LAW

Fake COVID Vaccine Cards Are Being Sold Online Using One Is A Crime

June 8, 2021 · 5:47 AM ET

JACLYN DIAZ

Executive Summary

This summer, numerous media headlines focused on online sellers illegally pushing COVID vaccine cards for sale on social media platforms, particularly Telegram. The cards stamped with Centers for Disease Control (CDC) logos that sell for between \$100 and \$200 have been hot commodities for months. So why are illegal vaccine cards still so readily available on social media platforms?

Researchers from Digital Citizens Alliance (Digital Citizens) and Coalition for a Safer Web (CSW) have theories about why the number of vaccine cards available seems to be growing instead of shrinking. However, the two organizations are even more concerned about another development that should make headlines as well.

Vaccine card sellers have moved from the backrooms of Telegram and into the mainstream via Facebook and Instagram.

Digital Citizens and CSW researchers contacted sellers on Telegram, Facebook, and Instagram and found many of the same patterns and tactics from each:

- Utilizing misinformation and disinformation to persuade vulnerable buyers to act quickly.
- Seizing on the language of the anti-vaccine movement to at least appear as kindred spirits. Sellers offer the cards as a sort of 'public service' to those in the anti-vax community who don't want the vaccine and don't want to compromise their lifestyle because of vaccine mandates.
- Showing pictures of cards with lot numbers and actual stores (including major pharmacies), then promising in 1:1 conversations on apps like Telegram and What's App the ability to produce a card that appears legitimate – using actual vaccine lot numbers and store information. The sellers claim and/or imply that they have contacts inside legitimate, respected drug stores and the offices of medical professionals. The rogue sellers claim they can create cards designed to evade potential law enforcement scrutiny using resources from legitimate businesses.

To be clear – researchers have doubts about the claims of these cons. They ask to share personally identifiable information, including social security numbers, which could be what the sellers are after. While it's possible that a lone wolf employee could go rogue and utilize their position to help fellow anti-vaxxers, there is every reason to suspect that the pharmaceutical sellers (aka, CVS, Walgreen's, some supermarket chains, and independent operations distributing the COVID-19 vaccine) are in no ways a party to this activity. Furthermore, Digital Citizens and CSW believe these entities are being victimized by bad actors being enabled by the social media platforms.

Furthermore, vaccine makers and drug store chains are the victims here. Messages and posts from people claiming to be rogue employees or connected to rogue employees further erodes public confidence in institutions we need to trust.

Researchers wanted to buy the cards to see if sellers might be infiltrating the digital bookkeeping of pharmacies and/or doctor's offices. But the FBI has cracked down on anyone in possession of the cards. It may have been illegal for Digital Citizens to even try to buy the CDC's COVID vaccine cards.

So instead, Digital Citizens and CSW will share these findings with the companies mentioned in posts and messaging, including vaccine makers and pharmacy chains, hoping they can determine what is going on – if anything - inside their networks. Suppose bad actors are entering unvaccinated people as being vaccinated. In that case, there is potential for even greater chaos in the efforts to determine what communities might be most vulnerable to a potential COVID-19 outbreak.

Potentially, fraudulent cards could allow unvaccinated people to move and mingle in places where they can be dangerous – like schools or amongst crowds at sporting events and concerts. The danger here is massive.

Social media platforms enable criminals to engage with large swaths of the public online. Many of the platforms show no urgency to address an issue that has been escalating for weeks. (As researchers were reviewing some of the accounts on Facebook and Instagram, news broke that YouTube would ban all anti-vaccine content from its platform.)

Here are just some of what the Digital Citizens and CSW research teams have seen during this two-month investigation.

Posts Spreading Fear Through Misinformation & Disinformation

Image 1. "Doctor" selling cards on Facebook spreads misinformation and disinformation to sell fake cards

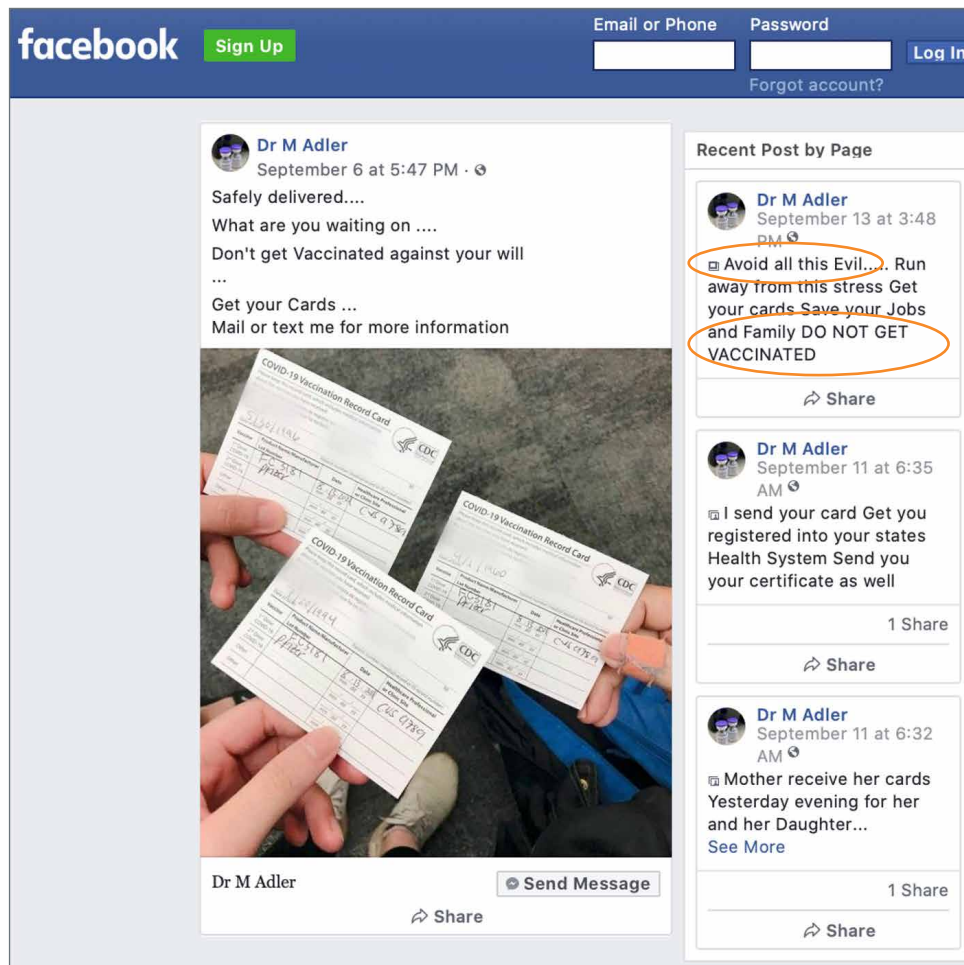

Image 1

Facebook Post including what can be inferred to be counterfeit vaccine cards, on which fake sellers have put a Pfizer lot number (3181) and a CVS store number (9789, which appears to be in Mission Hills, CA). The account operator, who calls himself "Dr M Adler," encourages people to "avoid all this evil" and "DO NOT GET VACCINATED." (Screenshot taken September 29)

Images 2-3. In Images 2 and 3 (below), the "Doctor" shares pictures of people with various kinds of skin irritation looking like some kind of blister. In one message (Image 3), he writes, "This is what Pfizer does to you... Stay safe with your vaccine Cards available at your convenience."

Image 2

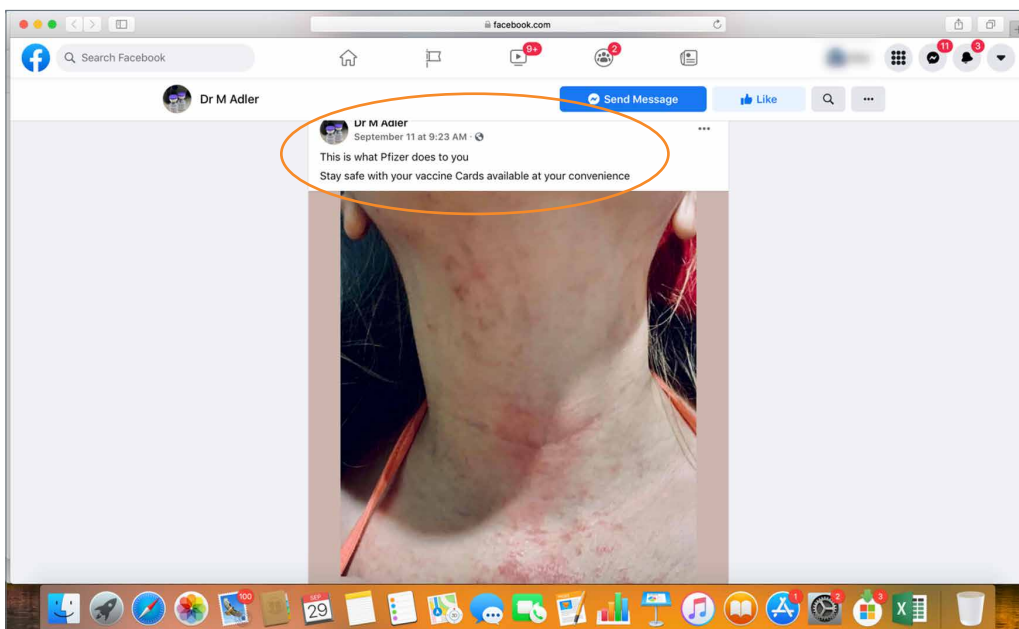

Image 3

Images 4-5. Novaccine4health – driving followers from Instagram to Telegram (and vice versa).

Image 4

Image 5

Researchers found Novaccine4health with just six posts on Instagram (Image 4) but more than 7,400 followers. The page description makes its objectives very clear – “get valid v cards.with valid batch numbers, avoid the vaccine.” It then includes a link to a Telegram page (Image 5), where the operator shares even more political rhetoric. (From Instagram and Telegram, shared September 23, 2021.)

Sometimes misinformation is political, while others it is just about driving sales. For example, the aforementioned “Dr. Adler” said his cards were helping people avoid vaccinations. Digital Citizens and CSW shared the “Doctor’s” posts with investigators from WRC-TV, NBC 4 in Washington, DC. WRC’s News 4 investigators searched for some of the people whose cards were included in Dr. Adler’s posts. One card that intrigued the reporters belonged to “George Morrice”, who was pictured holding his card while wearing a uniform with a badge. In “Dr. Adler’s” post, he claims the picture shows that even “Police Deputies” are using his cards. (See Image 6 below).

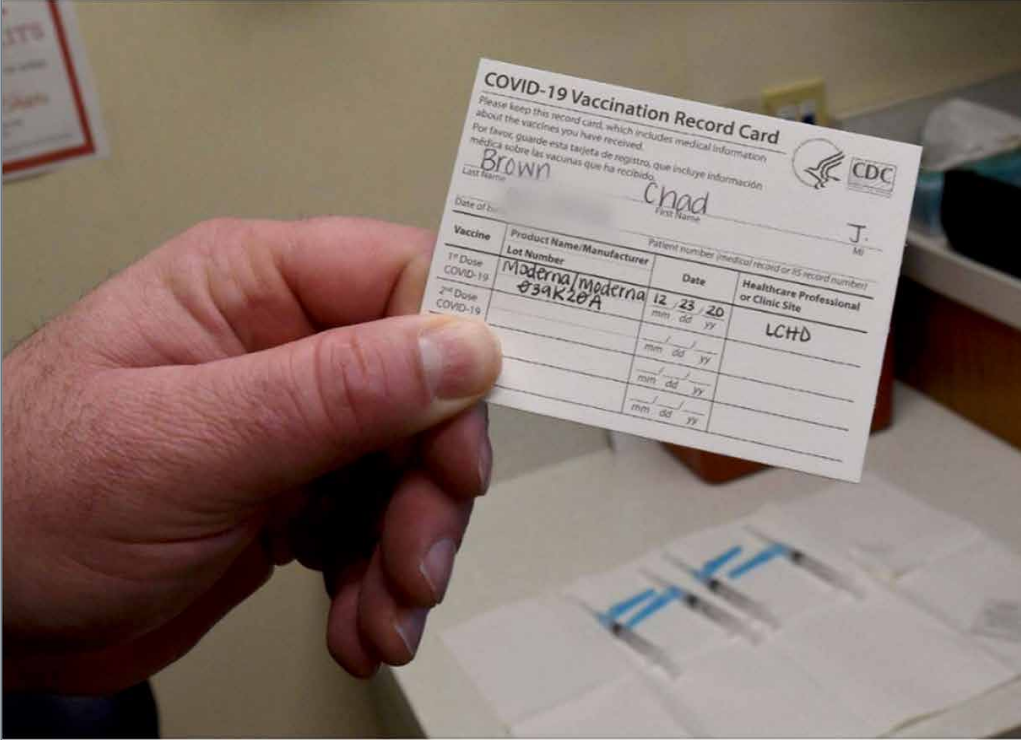

Image 6

But in truth, Morrice is the retired Fire Chief from the Norwood, MA Fire Department. The photo above is an actual photo of Chief Morrice holding his card after received his shot. Norwood provided News 4 Investigators video proof showing Chief Morrice getting vaccinated.

There is also the story of Chad Brown (see his card in Image 7 below).

Image 7

WRC contacted Brown, who is the Licking County (OH) Health Commissioner. He has spent months trying to get people vaccinated in Licking County. Brown said the photo used in “Dr M Adler’s” post (Image 7) comes from a [newspaper story](#) where he mentioned his vaccination.

Chats – Researchers Engage With Sellers to Learn About "Tactics and Motives"

Images 8-9. Sellers Promise Cards from "Doctors" Who "have access to all the medical database" cards

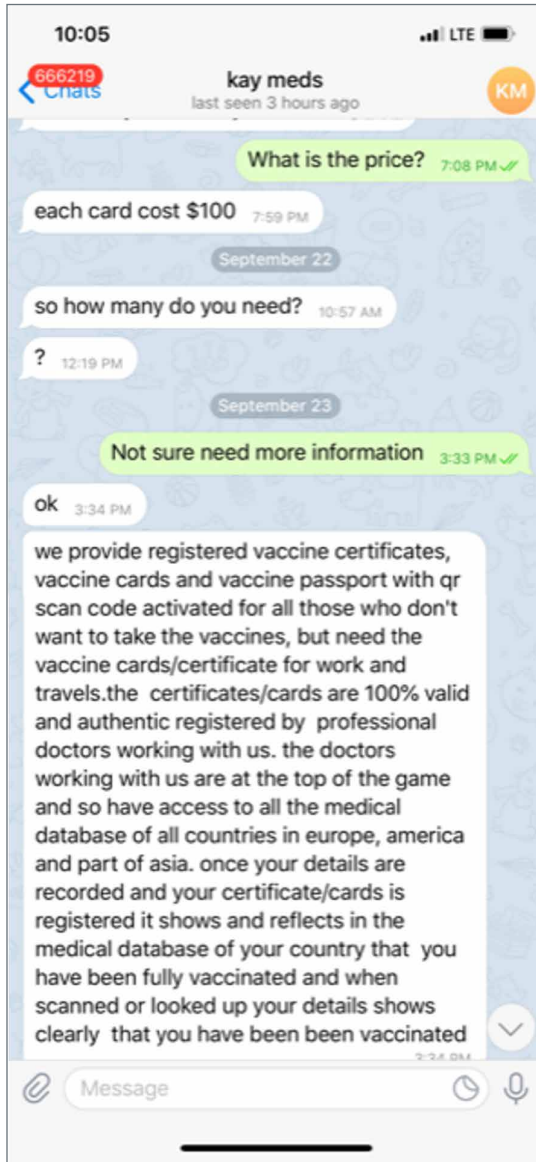

Image 8

Image 9

In Image 8, the seller promises doctors who "are at the top of the game" to provide registered vaccine certificates. From Telegram, a screenshot of chats from September 22-24, shared Sunday, September 26, 2021.

Image 10. Sellers offer discounts on vaccine cards

Image 10

The seller offers a discount to those ordering more than one vaccine card. From Telegram, shared September 28, 2021.

Image 11. Seller posting in Facebook "Support Group" offers registered cards in Washington, DC pharmacies

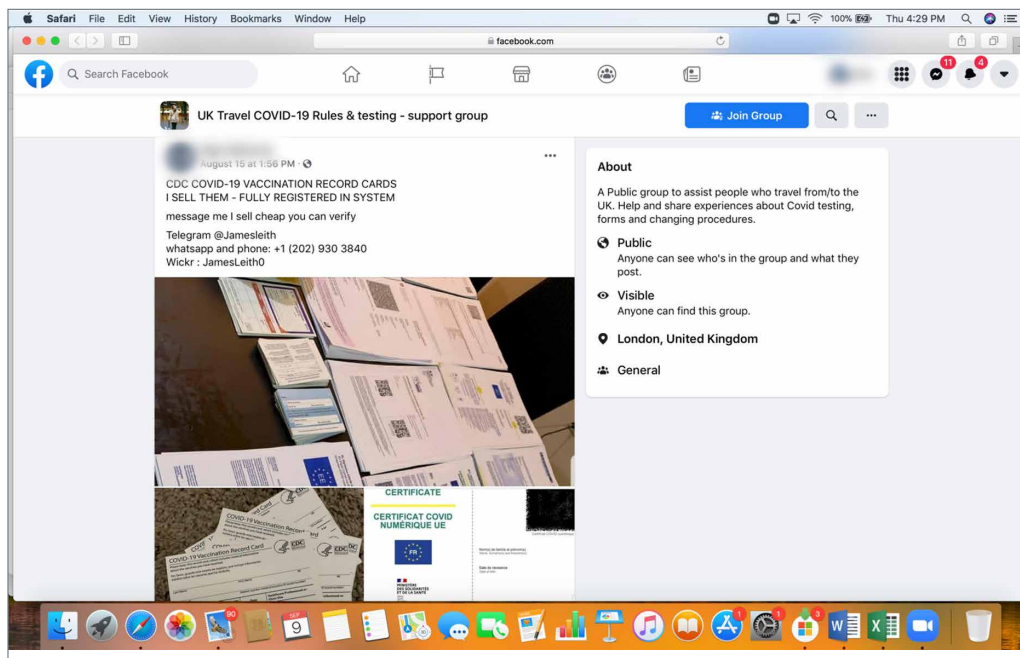

Image 11

After finding this Facebook post (Image 11), investigators started a chat with the seller. In a WhatsApp chat, the seller indicated they only sold "registered cards." The seller indicates they can register the cards with two CVS stores in Washington, DC, and include either Pfizer or Moderna as the vaccine. The picture within Image 13 (next page right) shows a card indicating the vaccine recipient got two doses of the Pfizer vaccine. The "Wag 17303" corresponds with a Walgreen's in Steubenville, Ohio. The information on the card indicates that the "second shot" supposedly happened at a Rite Aid. According to the Rite Aid store locator, the closest Rite Aid to Steubenville is in Burgettstown, PA, about 18 miles away. Again, it appears bad actors are victimizing large pharmaceuticals like Walgreen's and Rite Aid.

Images 12-15. Image 13 (below right) includes a card “registered” at a CVS, but researchers could not find a store number that matched the one on the card. From Facebook, screenshots from chats September 2-5 shared September 23, 2021.

Image 12

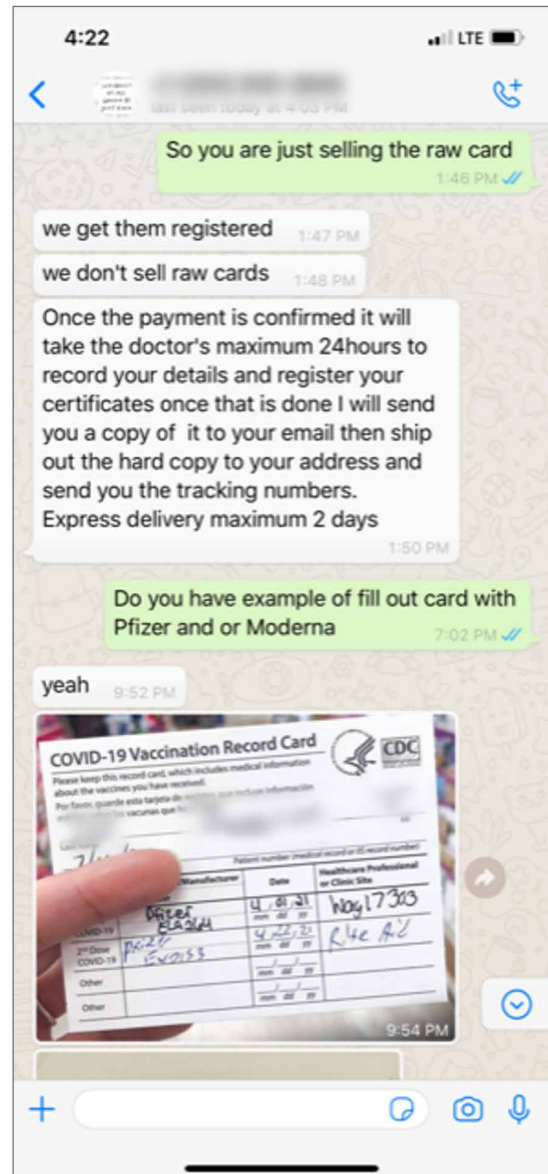

Image 13

Image 14

Image 15

Image 16. Instagram account implies vaccination card with lot information for the Pfizer vaccine comes from CVS in Iowa

Image 16

The Instagram account of "covid19_card_greenpass" includes a CDC with lot numbers EP6955 and ER 8737 for the Pfizer vaccine. The store number on the card in Image 16 shows CVS Store 16914, which corresponds with a actual store – a CVS in Urbandale, Iowa. In a chat with a researcher Image 16), the seller indicates they can get a vaccine card with information from a store in Virginia (see Image 18 on the next page). From Instagram, screenshots were shared Sunday, September 19, and September 28, 2021).

Image 17

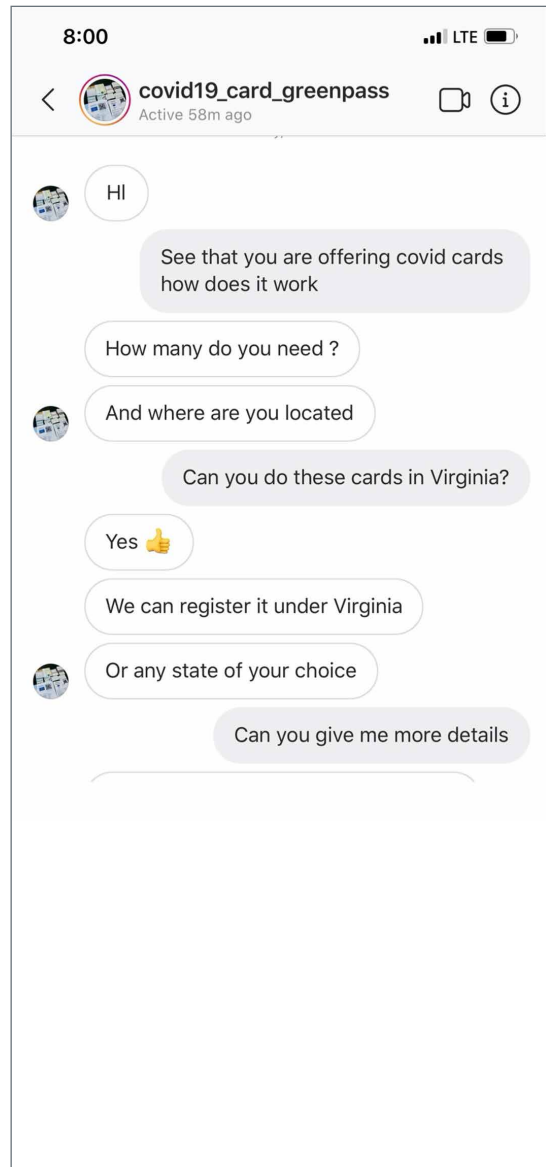

Image 18

Images 19-22. Lots numbers and stores allow sellers to charge more

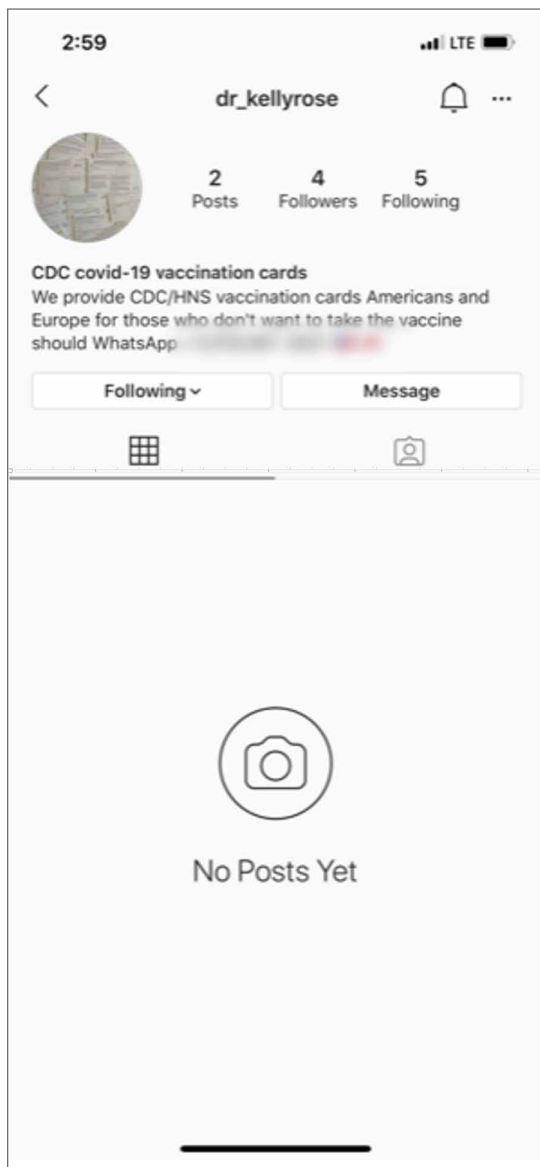

Image 19

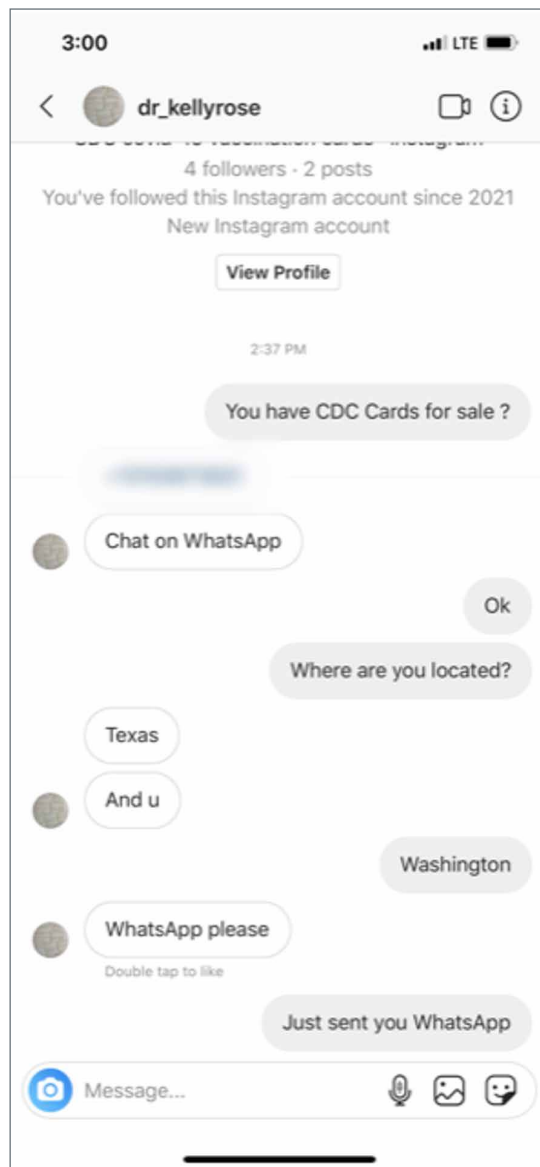

Image 20

“dr_kellyrose” finds buyers on Instagram. As you can see in image 20 (above), the operator quickly pushes potential buyers to WhatsApp, where end-to-end encryption ensures a private 1:1 conversation. Once in WhatsApp (Images 21-22 on the next page), Doctor Rose explains their cards cost more because of the information they include. Also in Image 22 (next page, right side), the operator shares an image of a card with a Pfizer lot number and registration with The Little Clinic of Stony Brook, [a retail clinic inside a Kroger near Louisville, KY](#). Bad actors are targeting not only large operators, but independent operators like this company in Louisville. (From Instagram and WhatsApp, shared September 1, 2021)

Image 21

Image 22

Algorithmic Amplification and Search – How the Platforms Lead Sellers to the Vulnerable and the Willing

Images 23-26. With Images 23 and 24 on page 18 and Images 25 and 26 on page 19.

Image 23

Image 24

After searching for sellers, researchers saw how Instagram began suggesting obvious sellers appearing to offer to share COVID vaccine cards, like "doctor_dicksons.cards" in Images 23-24 above (From Instagram, shared September 23) and "Max Williams" in Images 25-26 (next page) (From Instagram, shared September 28).

Images 25-26. The Platforms Suggest Connections with Sellers

Image 25

Image 26

Searches on Google and Facebook led researchers to ads for DHGate. According to the site's description, "DHgate.com is the world's leading online wholesale platform for goods made in China, connecting international buyers with Chinese wholesale sellers who offer the same quality products found elsewhere at a fraction of the price." Wikipedia calls it a "cross-border e-commerce marketplace that facilitates the sale of manufactured products from suppliers to small and medium retailers." It seems strange to find the CDC's COVID vaccine cards for sale on the site, but that's exactly what happened when they used certain search terms on Facebook (see Images 26-27 from a September 1 search) and Google (Image 28 from an August 28 search).

Images 27-28. How Did a Search Take Researchers to a Chinese Online Marketplace with COVID Vaccine Cards for Sale?

Image 27

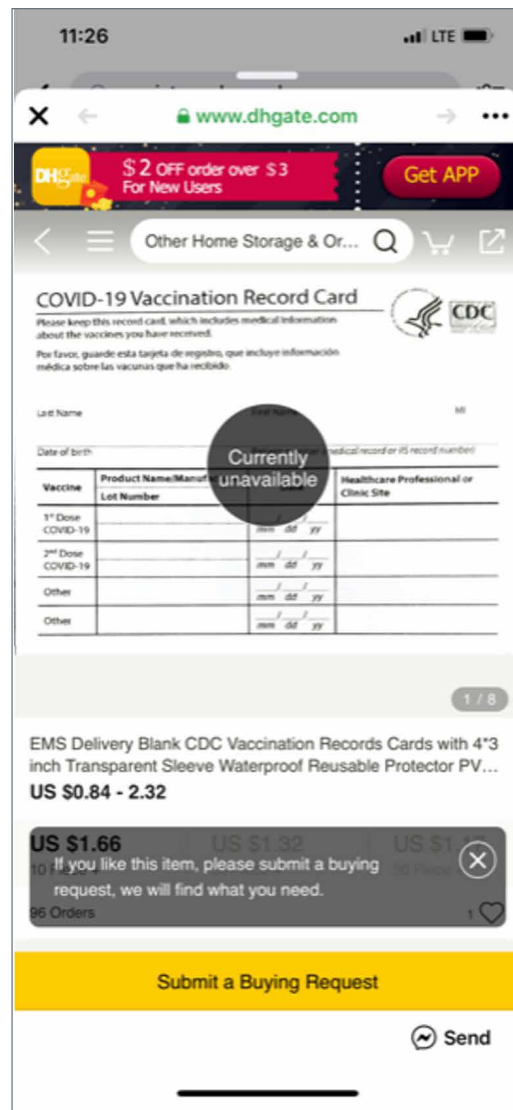

Image 28

Image 29. How Did a Search Take Researchers to a Chinese Online Marketplace with COVID Vaccine Cards for Sale?

Image 29

Digital Citizens will share these findings with DHGate. The researchers are eager to learn about how items are posted on the site. There may be a perfectly reasonable explanation for how this would happen, and we're eager to hear it. Similarly, the world's advertising superpowers might also have an explanation as to why an ad from a Chinese company pushing illegally obtained COVID vaccine cards wound up featured in search results. We're sure that U.S. law enforcement, regulators, Members of Congress, and U.S. consumers will be eager to find out just what happened.

Conclusion

The Platforms Have to be Part of the Solution...
or They Will Continue to Be The Problem

Researchers discussed the purchase of cards with the operator of Joe Kim's Telegram page. The research wanted to know if "Joe Kim's" could sell cards from Maryland and/or Virginia. That's when "Joe Kim's" offered to share his database with the seller:

Image 30

The researcher pressed "Kim's" for more information – were they something home built to operate the business, or was this a look at a server operated by a state?

"Kim's" didn't offer a direct answer.

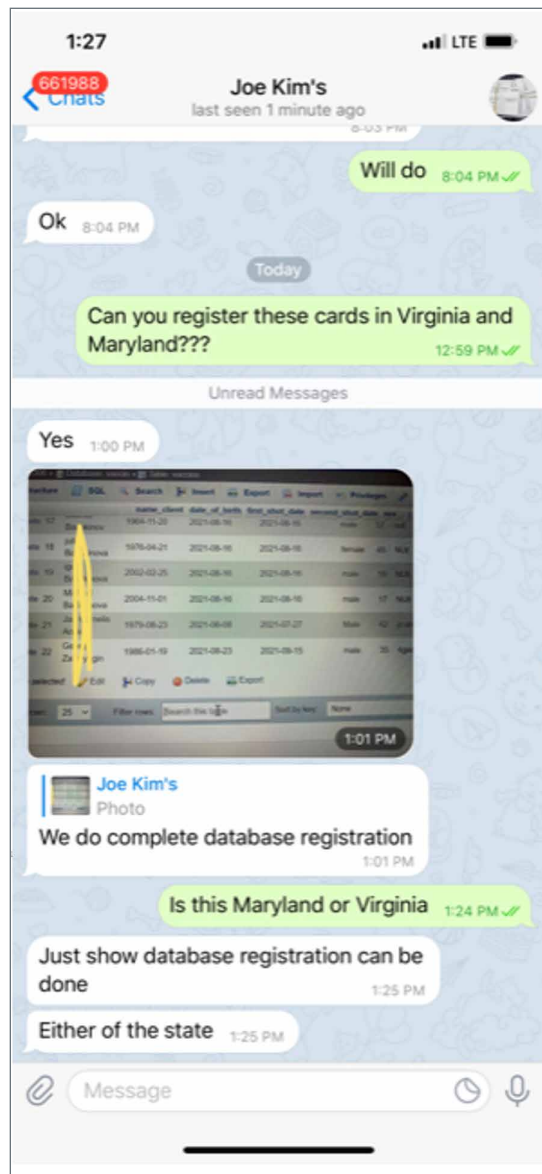

Image 31

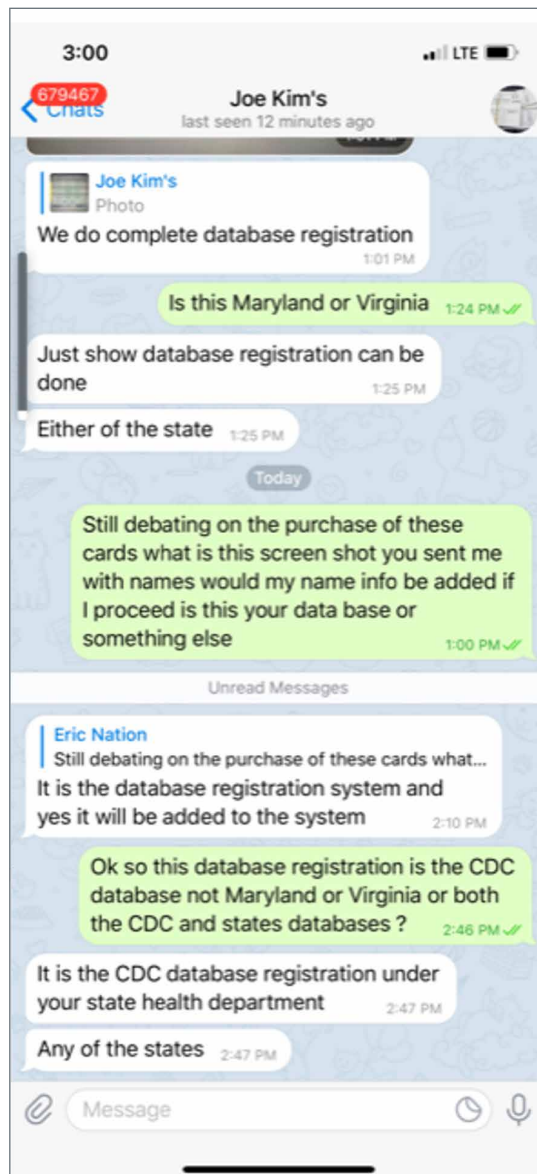

Image 32

Law enforcement will catch more than a few of these shadowy operators. Still, many will remain out of reach – either because they actually are literally out of reach operating from outside U.S. borders or they are sophisticated enough to stay under the radar of police. For every bad actor arrested, there will be many more evading capture.

These problems will continue until lawmakers crackdown on the platforms. The tech companies will keep saying they make very little money off criminal behavior. They will promise in Capitol Hill hearings that they are taking steps to prevent this activity, and they don't want it on their platforms. But organizations like Digital Citizens and CSW will continue to find these problems... and even worse, consumers will find them too.

The companies must come together to help crack down on this behavior. If YouTube can find a way to kick off the spreaders' anti-vax propaganda from the platform, wouldn't it benefit them to share what they know? The platforms prove every day, they are the most powerful non-military tools ever created. It's time for these company to turn their resources to truly fighting back against criminals instead of enabling them to continue this damaging, harmful activity.

While even the platforms won't stop all bad actors from trying - and some succeeding – from manipulating social media to commit crimes. What other possibility is there? Will we all have to wait for Congress to solve this? Or a breakthrough in the courts that finally forces a change? Or maybe it will only come after a disaster of unthinkable consequence finally forces the platforms to re-think their ways?

For those of us who spend at least some of our lives on social media platforms, cheating remains.

About Digital Citizens Alliance

The Digital Citizens Alliance is a nonprofit, 501(c)(6) organization that is a consumer-oriented coalition focused on educating the public and policymakers on the threats that consumers face on the Internet. Digital Citizens wants to create a dialogue on the importance for Internet stakeholders—individuals, government, and industry—to make the Web a safer place.

Based in Washington, DC, the Digital Citizens Alliance counts among its supporters: private citizens, the health, pharmaceutical and creative industries as well as online safety experts and other communities focused on Internet safety. Visit us at digitalcitizensalliance.org

About The Coalition for a Safer Web

The Coalition for a Safer Web, a cyber counter terrorism and anti-extremism non-profit organization whose mission is to prevent social media platforms from serving as pathways for extremists and terrorists to plot, incite, and execute domestic and foreign acts of violence. CSW currently advises Congress, the Department of Homeland Security, the Department of Defense, and the National Security Council on social media-based extremist incitement and operational planning, as well as private industry and civil society organizations. Visit us at coalitionsw.org.
